

How to Unstake with AAU Midas Staking Agent

User Guide

1. If your metamask wallet is connected you should see your deposited balance. In the image below the deposited balance is 3.4035751 AAU. To withdraw AAU tokens, click on the **Withdraw** button. You should get a pop up that allows you to set your withdraw limit. Select 'ok' to continue the withdraw.

2. There are two ETH transactions needed to withdraw. The first transaction is a 'Distribute' transaction that moves rewards from the locked pool to the unlocked pool. Confirm the first transaction (distribute event) in Metamask. You can change the gas fee by clicking on **edit**.

AAU
AmpleForthGold
Synthetic Gold forged using Ampleforth technology.

3. The second transaction is the 'Unstake' event. It removes your deposit and also sends the reward to the same address. Confirm the second transaction (unstake event) in Metamask. AAU tokens should then appear in your Metamask account.

Midas AmpleForthGold AAU Agent is now live!
